

## Study Strategies Information Sheet

Being a university student involves being in situations that cause emotions such as **panic** before an exam or class presentation, **stress** about managing your workload, rumination when you get a **disappointing** result, issues like perfectionism and procrastination, and **celebrating** your successes. The Tuned In course shows you how to use music listening and other simple techniques to manage your emotions in such situations<sup>1, 2, 3, 4</sup>.

Music listening has been found to evoke a range of emotions and is the number one leisure activity among young people. Developed at the University of Queensland by Prof Genevieve Dingle and colleagues, the 4-session Tuned In course is delivered in groups.

We use participant-selected music to evoke emotions in sessions, and activities designed to increase emotional response to music (drawing music-evoked imagery, body sensations, and lyric analysis). We learn about a 2-dimensional model of emotions that helps to locate our current emotional state and our goal emotional state (if that is different)

### Program Sessions:

1. **Feelings are your Friends** (education about emotions and their functions)
2. **Fearing the Worst** (panic and anxiety related to exams and performance situations)
3. **Stress Less** (managing stress of multiple assignments due, procrastination, perfectionism)
4. **Finding the Fun** (enhancing positive emotions)

Tuned In is **FREE** for all UQ undergraduate students. Sign up now:
